

5.2 Environmental Policy

Hawkes Bay Sandblasting Ltd (HBSB) undertakes its activities to ensure that environmental effects and pollution are prevented or minimised and that it operates in an environmentally and economically sustainable way.

To this end an environmental management system will ensure its operations activities and services with significant potential to create adverse impact on the environment will be controlled, measured and continuously improved.

HBSB will ensure the organisations compliance obligations are documented, monitored, maintained and reviewed annually.

Environmental Objectives are set each year in conjunction with budget planning following an annual review of the previous year's results and documented in the Environmental Management System.

The Objectives will be relevant to functions levels and indicators will provide the means to measure performance.

The environmental policy is contained in each employees induction pack and a current version is maintained on the company website
